KKday Employee of the Year (2023, 2024)

CAREER TRAJECTORY

13 Years, Three Chapters

- 2013 – 2017 **Yuanfeng Technology Group · Full-Stack**
Multi-merchant SaaS e-commerce (10,000+ merchants) · IM system (2M+ daily messages)
- 2017 – 2022 **Shopex · Lead Developer**
Apple China reseller platform (¥10B GMV in 5 months) · Golden Tomato Award
- 2022 – 2026 **KKday · Senior Backend Engineer**
Affiliate platform owner → B2C transaction flow → Conversion task-force lead

Affiliate Marketing Platform Owner

- **Top contributor** and owner of two core services — affiliate-service (majority of all commits) and affiliate-api — as Code Owner and PR gatekeeper
- **Official Google integrations:** Things To Do product feeds, POI ranking, Google Transit European rail sync
- Integrated 10+ affiliate channels including ShopBack, Market America, Asia Miles and Naver Shopping
- Designed the **commission settlement system:** rules engine + monthly re-runnable settlement + BigQuery attribution

Affiliate revenue grew **200%** YoY; API latency down **65%** (120ms → 35ms)

B2C Core Transaction Flow

- **USJ booking-date changes**: re-architected across 4 services, authored 7 SA/SD docs; a single cross-team decision table secured a top-tier supplier renewal
- **GYG B2B dynamic pricing**: end-to-end pricing from listings to checkout, with a legacy-app safeguard
- **Checkout rebuild**: many-to-many SKU-to-traveler mapping, shipped with zero P0/P1 escapes
- **Product architecture upgrade**: package grouping, bundles, calendar delegation — resolved 15+ cross-platform inconsistencies

Major Outage Response · Primary Responder

- **Root cause:** a microservice dependency exhausted the PHP-FPM worker pool, taking the app down for 15 minutes
- **P0+P1 hardening in 7 days:** timeout tuning · exception fallbacks · a lightweight Redis circuit breaker · two-tier kill switch

cart/validate p99

~~25s+~~ < **2s**

5xx error rate

~~0.05%~~ < **0.01%**

iOS checkout white-screen

Frequent **Eliminated**

Owner, Pre-Purchase Conversion Task Force

- Leading a **6-person cross-platform team** (iOS / Android / Web / Backend), reporting directly to the PM with shared accountability
- North-star metric: **CVR 1.2% → 1.8% (+50%)** — a structural revenue lift
- Built the operating rhythm: standups · 1-on-1s · OKR alignment · a CVR health dashboard
- Coordinating the full pre-purchase funnel — product page → cart → checkout — for experience and performance

Putting AI Into the Engineering Workflow

- **VM Health Center** (TypeScript + Slack Bolt + Elasticsearch, built solo): a team dashboard and service-health monitor with **AI root-cause analysis**, aggregating Jira / GitHub / Confluence into daily and weekly reports
- **Maestro** (TypeScript CLI): a **convergence layer for multiple AI review bots** — CodeRabbit / Copilot / Codex / Gemini — with classification, three-stage dedup, auto-fix and convergence monitoring
- **Claude API applications**: automated SEO slug generation across 8 locales with hash-based cost control, and a Git workflow AI-review automation system

SKILL MATRIX

Core Skills

<i>Languages</i>	PHP (expert, 8+ yrs), TypeScript / Node.js, Go (basic), Shell
<i>Frameworks</i>	Laravel / Hyperf / ThinkPHP, Vue
<i>Data & Messaging</i>	MySQL, PostgreSQL, Redis, Elasticsearch, BigQuery, RabbitMQ, Kafka
<i>Cloud Native</i>	Docker, Kubernetes, AWS / GCP Serverless, GitHub Actions, Grafana
<i>Architecture</i>	Microservices, BFF, event-driven design, circuit breaking & rate limiting
<i>AI & Tooling</i>	Claude API / Copilot SDK, AI agent workflow orchestration, AI-assisted engineering

THANK YOU
